CONTACT DETAILS

As a medium-sized company based in Tägerwilen in Switzerland and Hardheim in Baden-Württemberg, Germany, we help create attractive outdoor living spaces with our high-quality sun-protection systems. For over 20 years, our in-house development and production has provided the foundation for our operations around the world. Over 20,000 square meters of production and storage space enable us to react to our customers' wishes with flexibility.

Our name, Membran-Design-Technik (membrane design technology), also illustrates our agenda: we use our considerable technical expertise to realize high-quality and sophisticated design. Our unique products are highly appreciated around the world for their form and function. People enjoy the free spaces that we open up far beyond our umbrellas: textile outdoor architecture.

NEW MOTORIZATION VIA SOLAR PANELS

- Manual or electric crank for opening and closing
- Easy to anchor thanks to a foldable adapter
- Easy exchangeable cover
- Windproof up to speeds of 37 mph, provided proper anchoring exists
- Vandalism safe with cladding design

Sizes

4x4m / 5x5m / 6x6m

Ø 4m / Ø 5m / Ø 6m

TULIP UMBRELLA TYPE E

TULIP UMBRELLA

The MDT tulip umbrella is constantly developed so that it can be freely designed. Whether alone as a unique design, artistically arranged in groups, or as a special means of presentation, this umbrella helps create new notions of freedom when it comes to recreational and outdoor areas. Available in a multitude of colors and individual prints, the Tulip umbrella enriches cultural and private events when combined with atmospheric lighting. Different aroma/scent diffusers are available for different food and beauty events. Rain flows down the mast and plexiglas and can be routed either into or onto the ground, depending on the location and customer preferences.

- Automatically unfolds and closes
- Rain drain

DOUBLE CANOPY UMBRELLA TYPE AV

DOUBLE CANOPY UMBRELLA

In the course of the constant development of our product line this umbrella – offering a striking design both in daytime and at night – has been developed. Through its new and innovative design with a double membrane and an internal, built-in lighting it helps to create new options of freedom when it comes to outdoor areas. This Umbrella is given a functional value through its integrated rain gutter which consequently leads the water into the ground by a drainage. An interesting effect is caused by the chromed mast at night. The mast vanishes into the dark and the double membrane looks like a floating cushion. The umbrella can be installed as a single object or multiple umbrellas can be combined by a zipper system creating a complete roofing. This Umbrella is effective and functional in any season.

- Rain drain

MODULAR EVENT CANOPY

By adding more units to the modular system, the entire structure becomes stronger and increasingly wind resistant. Drainage takes place via a series of central supporting columns and each canopy piece is connected with a watertight capping to produce a robust and weather protective system. The lightweight frame is under 30 kg and can be installed by three people at around 1 sq m per minute. Erection time is considerably reduced compared to marquees and existing canopy systems, making them ideal for events and ceremonies.

TYPE EV
 TENSILATION
 SYSTEM
 WITH FLOOR
 ELEMENTS

FRAME

The spokes are made out of specially designed aluminium profiles (50x30 mm with integrated keder channels) supported by hi-tensile galvanised steel cables, which reduce the system weight considerably. The centre pole has a aluminium profile also with integrated channels for the opening system and electrical conduit. The central hub contains a U profile for the attachment of the spokes. The frame is powder coated (polyester powder ca. 80 µ).

- DB 706 Anthracite Matte (standard)
- White RAL 9010 (optional)

MECHANICS

The canopy is opened and closed using a coated polyester rope developed specially for the sailing industry that boasts high UV stability and super low friction coefficient. The rope is secured using an automatically-locking yachting cleat for safety, and the rope can be conveniently tucked away into the mast after installation.

 COLLAPSIBILITY	THOUSANDS OF CYCLES	Good performance

Polyester yarns have many positive characteristics, such as easy to clean, easy to wash and good transportation of moisture. Additionally they are lighter, more tearproof and more durable than acrylic yarns. The fibres must be protected against UV rays in order to stay strong and colorfast. This is done by special coatings, where the coating agent diffuses into the yarns. By balancing the combination of yarn and coating properties, our MDT Polyester/PU formulation is the most versatile material for collapsible membranes.

 SPRAY TEST	5/5	ISO 4920
 UV COLOUR RESISTANCE	7-8/8	ISO 105 B02
EXTRA DATA		
 COLLAPSIBILITY	THOUSANDS OF CYCLES	Good performance

Our newest acrylic yarns are already colored during the spinning process. In the course of a special wet spinning process, pigments are injected into the fiber during production. This manufacturing process is responsible for the overall great properties, such as intense, long-lasting and unique color brilliance. As a result, the fabric can be characterized by its high UV-resistance, its very good light-fastness and color-fastness compared to most other membranes.

The elongation of the woven fabric is identical in warp and weft direction. This is based on the special binding and yarn properties. The surface characteristics get increased by application of a water-resistance, mould resistance and dirt-repellency. A good flame retardancy is difficult to achieve for this material. Suitable mostly for small outdoor objects and where colour richness and stability is preferred.

	COLLAPSIBILITY	-	Not recommended

PVC is a thermoplastic coating used with suitable base fabrics - mostly polyester - to achieve a smooth homogeneous cover that is highly weather resistant. Main applications include areas which are continuously exposed to weather. With its sleek sealed surface PVC is more likely to use for permanent canopies openings than for products with frequent opening and closing cycles.

// MDT-TEX® 300 / 450 / 700 PTFE

TEFLON (PTFE)

	VALUE	300g/450g/700g		COMMENTS
KEY DATA				
TEXTILE	POLYTETRAFLUORETHYLENE (PTFE)			
COATING	FENOLPOLYMER MIXTURE			Low density PTFE coating on PTFE fiber
FIBER WEIGHT	270 g/m ²	430 g/m ²	680 g/m ²	
TOTAL WEIGHT	300 g/m ²	450 g/m ²	700 g/m ²	
STRENGTH				
TEAR RESITANCE WARP	2000 N/5cm	3200 N/5cm	5000 N/5cm	DIN EN ISO 13934-1
TEAR RESITANCE WEFT	2000 N/5cm	3200 N/5cm	3000 N/5cm	DIN EN ISO 13934-1
FURTHER TEARING WARP	20%	20%	25%	DIN EN ISO 13934-1
FURTHER TEARING WEFT	10%	10%	7%	DIN EN ISO 13934-1
ENVIRONMENTAL PERFORMANCE				
WATER COLUMN	> 500 mm			ISO 811
TRANSMITTANCE	35%			DIN EN 410
REFLECTIVITY	60%			DIN EN 410
EXTRA DATA				
FLAME RETARDANT	B1		DIN 4102 Difficult to ignite / often self-extinguishing	
TEMPERATURE RESISTANT	-200 - +327 C°			
HEAT STABILITY	95%		Loss on ignition	
POLLUTION RESISTANCE	HIGHLY RESISTANT			Imperveous to Acids, Bases, Keytones and UV
SELF CLEANING CAPACITY	LOW SURFACE POLARITY			Highly Hydrophobic fibres will not absorb moisture or chemicals
COLLAPSIBILITY	HUNDREDS OF THOUSANDS OF CYCLES			Highly flexible and tough material with no effective degradation over collapsation cycles
FABRIC WIDTH	225 cm			
MATERIAL THICKNESS	-	0,385 mm	0,6 mm	
COLOR	WHITE / BEIGE			Special colors available

The PTFE fabric specially developed by MDT-tex must be distinguished from the usual membrane materials made of PTFE-coated or laminated glass, aramid or polyester fiber fabrics. These are very stiff, hard and very kink-sensitive, which is why they are not suitable for foldable applications. The MDT-tex fabric, on the other hand, consists of PTFE multifilaments, which are formed from a plurality of twisted continuous fibres.
