history

Frech was founded 35 years ago

out of the intuition of current Managing Director Pasquale Rescio, who combined his passion and experience in steel processing and fabric coverings to launch a company that would make construction technique and design of tensile structures its strong points.

The company is now a family operation led by the founder and his children supported by directors, managers, engineers and highly qualified skilled labourers.

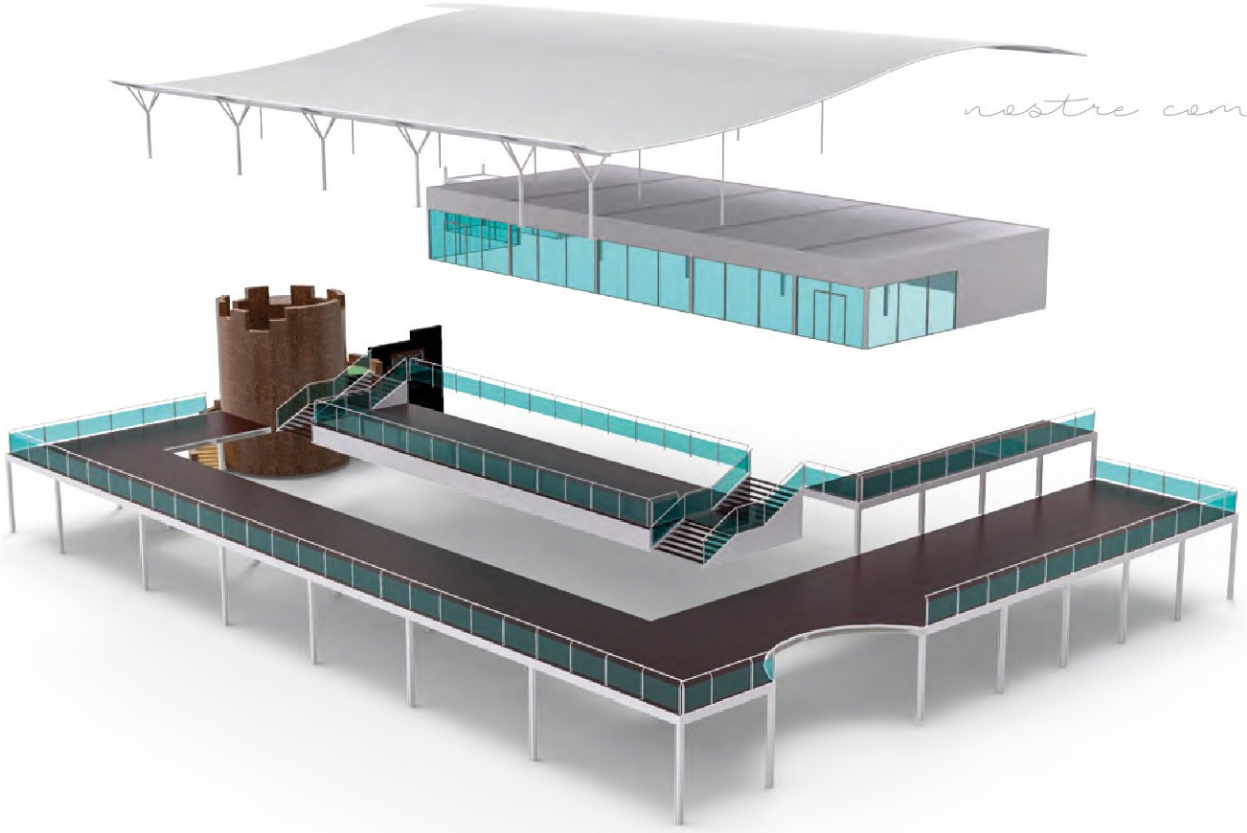

The historic roots of the company still continue to feed advanced projects and breathe life into future visions. The high quality offer is represented by the ability to invent, design and imagine solutions that begin with an idea and transform into engineering technique, construction technique and a complete set of systems and products.

mission

Fondiamo il nostro lavoro
sulla passione e l'innovazione,
sulla forza e lo sviluppo
delle nostre competenze.

Fondiamo il nostro lavoro sulla passio
l'innovazione, sulla forza e lo sviluppo
nostre compete

We base our work on passion and innovation, on strength and development of our skills.

Our operations include conceiving, designing, planning and industrialising outdoor solutions. We create modular coverings, pergolas, gazebos, dehors and tensile structures for commercial or residential use.

We deal with a highly competitive market on a daily basis that is full of challenges and can only be tackled with creativity and the skills of: planners, engineers, architects and designers. Bringing different professional skills together has strategic value because it is the constant comparing of notes that leads to innovation.

Just as constant dialogue with the customers is strategic, useful for best interpreting their needs and meeting an increasingly more frequent demand with technical and construction solutions: improving life and increasing the wellness of those who choose our products, adapting them to their spaces.

This is a promise that we entrust to a network of resellers, one of our reference targets, a distribution system capable of following the customer in choosing the product, during the sale phase and in the post sales stage.

Our strategic partners also include planners, architects, designers and engineers to whom we dedicate constant support in terms of technical and product consulting, application of the safety standards, structural calculations, certifications and EC marking.

The goal, whether for a direct sale or through intermediation, is to make the end customers' dreams come true, offering, at their specific request, a 'Made in Italy' architectural solution that is reliable and long lasting.

The commitment we undertake is to give greater visibility to the brand and the excellence of Puglia, Italy and Europe. Those who choose Frech *can identify with: quality of the products, safety, reliability, responsible industrial processes and environmental eco-sustainability.*

We will also continue to expand our team because we believe in the value of people and the contribution that their diversity offers the company in terms of skills, culture, geographic origins. Giving new talent and energy space is the best guarantee for constant growth, both social and productive.

Immaginiamo un mondo in cui

la [illegible] nia siano la risposta

all'esigenza di abitare lo spazio che

lo circonda.

vision

We imagine a world where beauty and ergonomics are the answer to the needs of mankind to dwell in the space that surrounds us.

We think of outdoor solutions as means of urban regeneration and, at the same time, as a comfortable location from which to admire the landscape or enjoy the benefits of outdoor living, in full respect of nature.

This is a vision that we convey to our distribution network and promote in the national and international markets where we operate.

To be faithful to our vision, we continue building strategic partnerships and new business relationships. We study the new trends and lifestyles, staying up to date with our ever-changing modern times.

In the coming years, we will be building a multi-channel sales network, offering the end customer maximum customisation of the purchasing experience. At the same time, we will be aiming at expanding the integrated design of outdoor solutions dedicated to the international contract sector, thanks to the flexibility that distinguishes our industrial process.

Una solida governance familiare, coadiuvata dall'esperienza e dalle competenze di manageringegneri, progettisti e maestranze

A solid family governance, supported by the experience and skills of managers, engineers, designers and highly skilled labourers allows us to work alongside architects and designers and make any design idea feasible. An architectural concept, pencil sketches and the draft of a design take shape thanks to the application of the highest skills in the structural engineering field. Skills that combine with historic craftsmanship and which represent the ability to find solutions for any project needs.

In addition to in-house professionals, **Frech** *also collaborates with third-party professionals.*

DESIGN

innovation

Its solid technological know-how acquired and continuously perfected over its thirty plus years of experiences, supported by a highly qualified technical and professional team, enables the company to offer timely solutions for all market needs. Research, design and production play a key role for the company and result in a continuous and constant dialogue between various professionals from all over the world: designers, architects, engineers and highly qualified workers.

flexibility

Flexibility in the production of the various components enables the piece to be adapted to the design. Tailor-made products, which are adapted to any architectural idea, offering extremely functional solutions that do not compromise on aesthetics.

The entire production cycles is distributed within the company itself: inspections in the area of intervention, the project design, the rendering phase, the construction of prototypes and, finally, the production and oversight of on-site assembly.

quality

The highest quality raw materials, state-of-the-art technologies and latest-generation machinery lie at the base of certified products, with a high quality standard. Products are guaranteed by the main process certifications: UNI EN ISO 9001:2015 (DNV CERT-05085-99-AQ-BRI-SINCERT), SOA certification (Cat. OS33 class. II)

sustainability

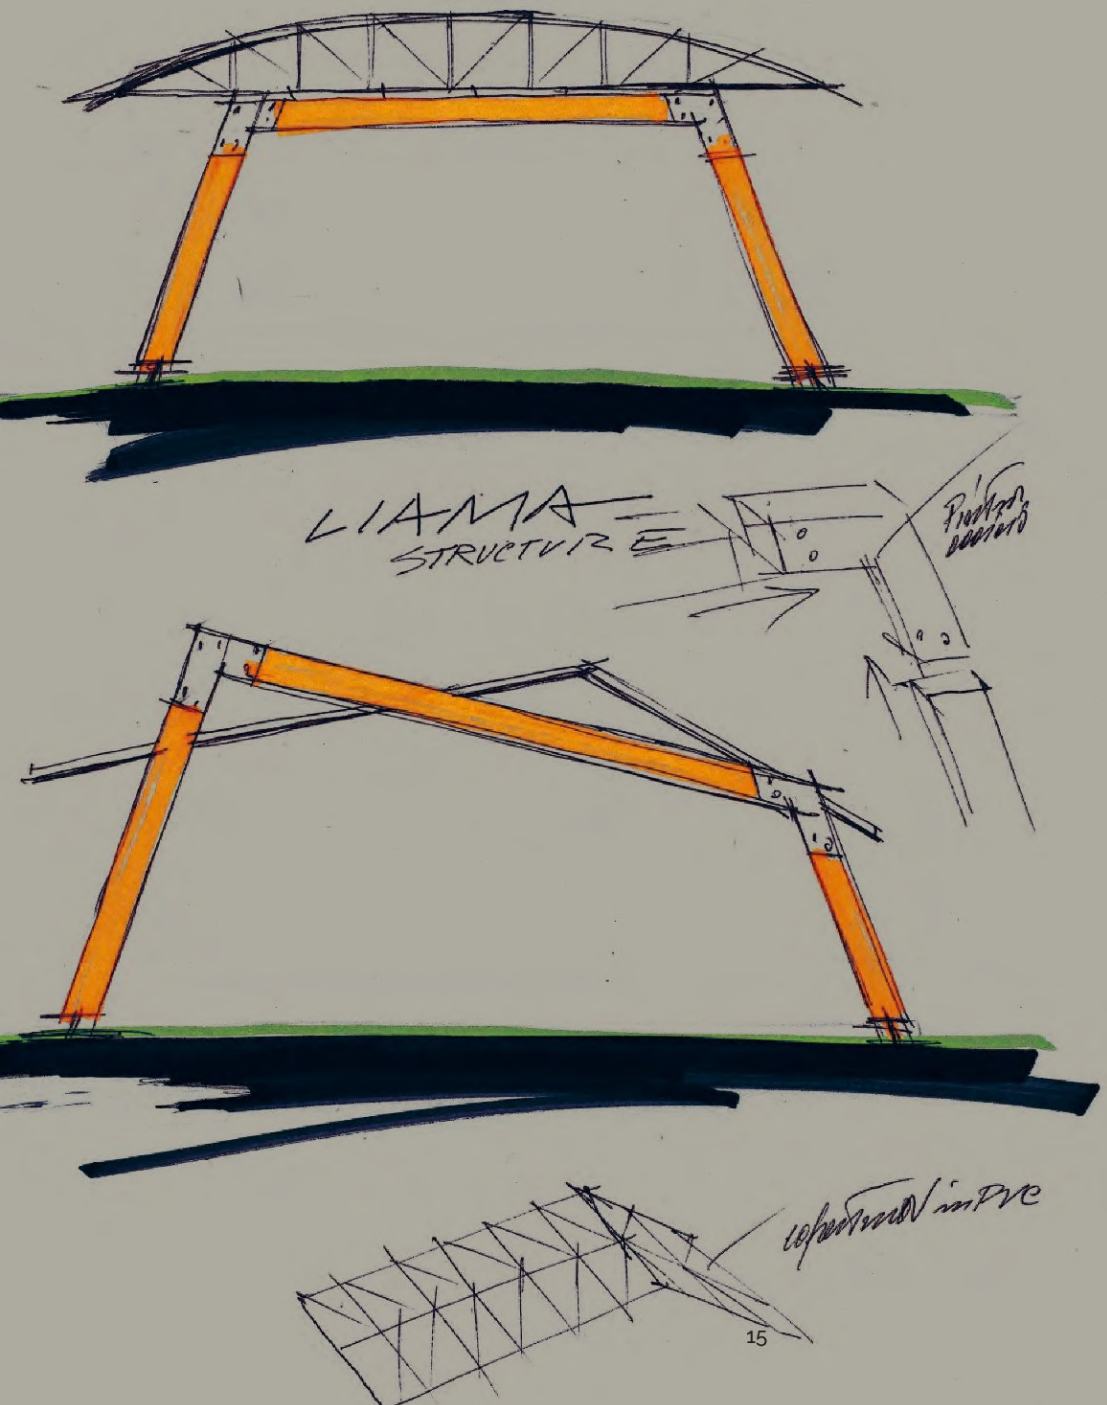

All **Frech** *products are designed to improve quality of life and to establish a proper relationship with the environment. Every solution can be adapted to any landscape context and to any need, be it public or private.*

Functionality, aesthetic refinement and environmental sustainability are the principles that inspire **Frech** *projects, concepts that have always been challenges to design.*

design

Technique and new ergonomics, a combination capable of expressing each of our lifestyles. From the collaborative meeting between professionals, craftspeople and customers springs the constant search for beauty that meets the needs of daily life. The design enables us to regain possession of squares, parks, beaches and terraces, transforming a space into a comfortable environment.

LIAMA
STRUCTURE

regeneration and urban landmark

Reflection on the issue of urban regeneration, as originated and developed by Italian architectural and urban tradition, draws increasingly from the Anglo-Saxon and European culture of urban renewal which has a broader feel, less construction and more economic-cultural, more social.

These days, intervening in urban systems regeneration policies means implementing the urban, dwelling, social-economic, environmental and cultural conditions of the city. Frech's *offer is oriented in this direction, with a particular vocation for open-air public spaces.*

Interventions on an urban scale testify to distinctive and representative locations, dedicated to social life and conviviality: from coverage of the market area in the town of Martano, to the gathering places for adults, to playgrounds for children, to dehors as urban décor elements for the coastal towns.

The Relais Masseria Le Cesine, of Cds Hotel bases its offer on the concept of relaxation in complete harmony with nature, without sacrificing the comforts of a 4-star stay.

Adjacent to the WWF protected Le Cesine Oasis and hosted in an ancient restructured farm nestled in the Puglia countryside on a XVII century ranch, this modern all-inclusive and informal resort has a private beach, accessible by means of a footpath through the pine and olive grove and dunes covered by Mediterranean vegetation.

The building complex, in addition to the farm, is made up of a spread out hotel in various, single story buildings, as well as paths and open-air picnic areas. The arrangement of the volumes, the geometries of the layout, the choice of materials and the finishes are a testament to an architecture that can be traced to a few essential guidelines which bring out the design intention of a sombre integration with the landscape and exploitation of the outdoor spaces as privileged points of view to enjoy nature.

CDS entrusted Frech *with the task of providing solutions to shade and protect these outdoor areas with original and functional structures in harmony with the sombre elegance of the Relais: from the open-air theatre for which an innovative organic tensile structure was created, to the shaded paths and the play areas with unique sail inserts to the large, retractable roof of the restaurant dining room.*

benchmark and environment

Robinson Apulia Resort, with its 210,000 square metres, is a magnificent club-resort located in the heart of the maquis, on a stretch of protected coast made up of: a dune and rear dune system, a serious of sea basins and canals and an imposing fossil reef with ravines.

The award-winning German brand Robinson, which boasts a chain of twenty-four resorts in fourteen different countries, stands out in the Club Hotel industry for its vision structured on strict service standards, as well as social and environmental sustainability policies.

Robinson chose Frech *to supply outdoor solutions precisely for our company's ability to fully embrace their values and to meet the high quality and sustainability standards.*

For Robinson Club Apulia, Frech *created the coverings of the Family Club and the restaurant area as a testament of the production line's ability to combine functionality, environmental impact and sustainability and distinctive design in observance of specific benchmarks.*

Nestled in the regional natural coastal park of Ugento, on the eastern part of the Salento coast, bathed in the crystal clear water of the Ionian, Vivosa Apulia Resort is the ideal place to stop for an anti-stress holiday.

A location immersed in green where the crystal clear water of the pools reflect like mirrors and the long, tree-lined path leads to the beach.

For Vivosa Resort, Frech *created the shady areas dedicated to relaxation and dining. Framed sails poolside and made-to-measure coverings on the restaurant terraces to enjoy the colours of the day and the magic of the nights.*

Quiet and discrete architecture in keeping with the style of the resort and its manifest.

integrated design

The Savoy le Grand Hotel in Marrakesh (Morocco) is the feather in the cap of the Moroccan tourism industry. It is a 5 star resort with an offer that includes: a 2000 m2 wellness spa, two outdoor pools, solarium, two indoor pools, children's pool, three international restaurants, café, coffee shop, lounge bar, a shopping centre, a business centre, meeting halls and a library. Frech *is supplier and partner to the Savoy le Grand Hotel for all implementation projects connected to the outdoor spaces.*

Frech *has created: the solarium covers, the top roof bar on two levels, the Mall entrance pavilion, the cover of the open-air restaurant with hanging garden. These are solutions that confirm* Frech's *ability to adapt to any project idea and to follow all of the creation stages: from design to installation and maintenance.*

the challenge of luxury resorts

The hospitality tourism model in Morocco, Egypt and more generally in the Arab world, is pushing more and more toward Luxury Resorts.

Hotels transform the attractive autonomous hubs, capable of setting up a complete offer and a multitude of services intended for a high level target and characterised by constant attention to innovation and customer satisfaction, just as the Tourism Agencies demand.

In recent years, Frech *has consolidated its partnership with one of the largest companies in the Egyptian-Moroccan area tourism sector, thanks to the vast range of products, the extensive possibilities of customisation, an acknowledged know-how guaranteed by an in-house team of technicians and designers capable of meeting specific needs or handling particular project intentions.*

coastal environments and architectural solutions

The coastal environment, the transitional border between land and sea, is a complex territory by its very nature. Architectural projects in coast areas therefore have the task of meeting the needs of seaside tourism, economic development opportunities for the territory and, at the same time, they must respect the landscape in which they are set. In compliance with the relevant European directives, the integrated approach to management and planning in coast areas is beginning to take its first steps and to produce important pilot experiences on major beaches, an area in which Frech *is active on the front lines.*

The company, with its natural vocation for flexible industrialisation, is capable of accepting the challenge of seaside resorts and structures that provide access to the sea. These are solutions that meet stringent constraints and contrasting requirements: extreme light weight and reversibility and at the same time sturdiness and static safety; a low environmental impact without sacrificing an exclusive design, wide range hospitality and long-lasting structures in a marine environment exposed to particularly aggressive atmospheric agents.

architecture, temporariness and reversibility

A global exhibit is a voyage into the ephemeral, an imaginative path on which the relationships between architectural thought, the sphere of impermanence and the communication-exhibit theme are expressed.
This clever mixture generates a complex of multi-shaped spacial mutations, setting up a series of reflections that are closely connected to daily life.
The project for the Ferrero pavilion at Expo 2015 was based on a reflection on the ethical theme of REUSE: giving value to the project meant also considering a subsequent reuse and keeping an "afterwards" in mind.

The entire work was conceived as a dual-life installation, a "dreamt dream" to evoke wonder during the Exhibit and the projection of a real architecture that would travel to faraway locations.
In fact, the structural modules, entirely modular, were disassembled after Expo 2015 and reassembled in new architectural projects in Africa.

Frech *created the entire project for Ferrero: the Kinder+Sport Pavilion, on a 1500 square metre area and 7 Satellite totem elements (Pods) that stood along the decumanus.*
At the end of the Exhibit, the structures were disassembled, taken to the Martano (LE) plants and adapted to become a school in a refugee camp in Cameroon and an infirmary in South Africa.

Frech has always been committed to the promotion of design,

architecture and innovation, so much so as to transform its Research and Development area into a contest dedicated to young talents.
In fact, for two years Frech *has been the sponsor of the Agorà Design event, an exhibition/event and represents the final phase of the competition of the same name dedicated to architects and designers.*
An art biennial that livens up the historic centre of Martano (Lecce), the town where the company has its headquarters, and transforms it into a crossroads of experiences, ideas, projects and professionalism.
Over the years, Frech *has been determined to give the event an international flavour by hosting prestigious names in architecture and design, among them: Stefano Boeri, Benedetta Tagliabue, Marco Rainò.*
Names that enrich a calendar of events, lectio magistralis, workshops that involved more than 50 speakers and thousands of guests.

For all those who participate in the competition, Agorà Design is not only a prestigious showcase but the possibility of transforming an idea and pencil strokes into a prototype.
In fact, Frech *is committed to prototyping the most suitable designs for an eventual release on the market. The projects of some of the participants in the 2017 edition are now in the* Frech *catalogue and on display at Made 2019.*

The objective of the event is to highlight every single step that leads to the creation of something new: idea, design, choice of materials and production, as well as encouraging dialogue between new generations of professionals and manufacturing realities. The programme of the event also ensures a lively debate on the themes of architecture and design, on the challenges of the future, with a special focus on: functionality, aesthetic care and environmental sustainability.
